

Prediction Report

Date:

11/06/2025, 12:59:01

Risk Score:

3.84%

Prediction Status:

pending

Doctor's Feedback:

Based on the cardiovascular risk prediction score of 0.038376327604055405, your risk of developing cardiovascular disease is relatively low. However, it is important to note that this score is just one aspect of your overall health.

Considering your medical inputs, it is recommended that you continue to monitor your blood pressure, cholesterol, and glucose levels. Additionally, quitting smoking, reducing alcohol intake, and incorporating physical activity into your routine can further reduce your risk of cardiovascular issues.

Please keep in mind that this is an AI-generated summary and it is important to consult with a certified doctor for personalized recommendations and further evaluation.
