Doctor's Feedback: Based on your current medical inputs, your cardiovascular risk prediction score is low at 0.0618. This indicates a low risk of developing cardiovascular issues in the near future. However, it is important to maintain and improve your overall health to continue reducing your risk of cardiovascular disease. To further lower your risk, it is recommended to: 1. Maintain a healthy blood pressure by monitoring and managing your systolic and diastolic readings. 2. Keep your cholesterol levels in check by following a healthy diet and possibly considering medication if necessary. 3. Manage your glucose levels through diet and exercise to prevent the development of diabetes. 4. Continue to avoid smoking and alcohol consumption to protect your heart health. 5. Stay physically active to improve your cardiovascular fitness and overall well-being. Remember to schedule regular check-ups with your healthcare provider to monitor your cardiovascular health and make any necessary adjustments to your lifestyle. Keep up the good work in taking care of your heart!
